POSTDOCTORAL POSITION AVAILABLE

A postdoctoral position is available in the lab of Dr. Tiffany Schmidt in the Department of Neurobiology at Northwestern University in Evanston, IL.

Our lab focuses on understanding how light signals are relayed from the retina to the brain to influence behaviors such as circadian photoentrainment, pupil constriction, and vision. We use a broad range of techniques including patch clamp electrophysiology, neuroanatomy, and behavior using a variety of genetic mouse models.

Candidates must have completed a PhD, MD, MD/PhD or equivalent before starting the position. Projects are available focusing on genomics, electrophysiology, or behavior, and expertise in one or more of these areas is preferred but not required. Start dates are flexible; the lab opens September 1st, 2014.

If interested, please send CV, brief statement of research interests and career goals, and contact information for three references to Tiffany Schmidt: tmschmidt@jhu.edu
